| Installation Instructions..... | 1 |
| Wiring Connections.....        | 2 |
| Hardware Jumpers.....          | 3 |
| Operating Manual.....          | 4 |

## 1. Installation Instructions

**It is recommended to mount the thermostat or return air sensors between 1.5 & 1.8 meters from the floor where possible.**

Separate the base from the cover by pressing the tongue (pic.1).

Gently disconnect the cover from the base with quick connector (pic.2)

Line the back panel up against the wall or flat surface on which it is to be mounted and drill the appropriate fixing holes (pic.3).

Insert screws so they extend approx. 3/16" (3 mm) from wall or surface.

Align the back panel against these screws, pushing it forward, allowing it to slide downwards to lock into position.

Make electrical connections to terminals on the back panel as shown on enclosed electrical wiring diagram

Reconnect the quick connector.

Attach the cover to the base, first the two shafts and then the spring.

Connect 24Vac to the thermostat; verify that LCD display is ON.

**Do not install battery before power is applied.**

Remove battery from back panel by sliding it to the left and out from its white retaining clip and mount it in black holder on front panel; insert it from the top, gently pressing downwards until it snaps into place and is held under the top clip of the holder. The '+' engraved on battery should be visible (pic. 4).

**Be careful when inserting the battery – the top clip of the holder is very fragile.**

Reassemble front and back cover.

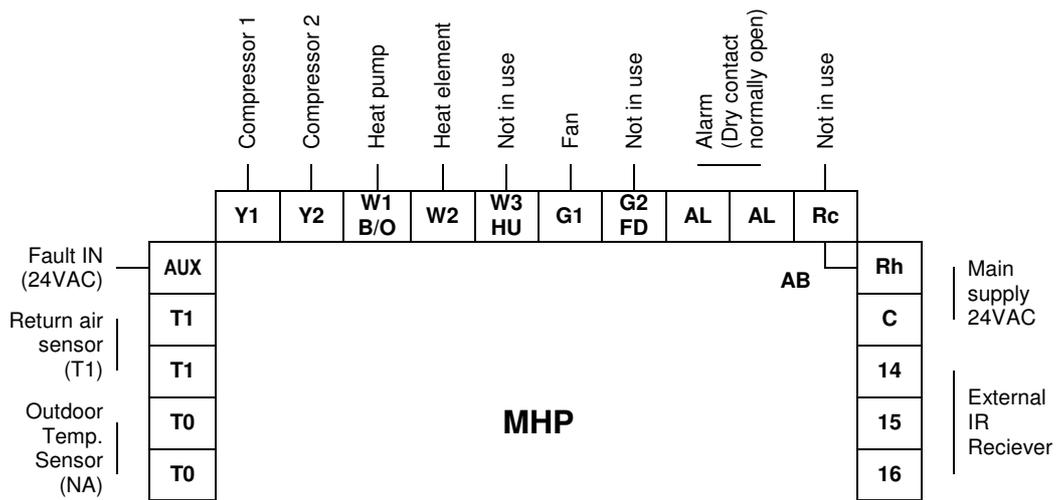

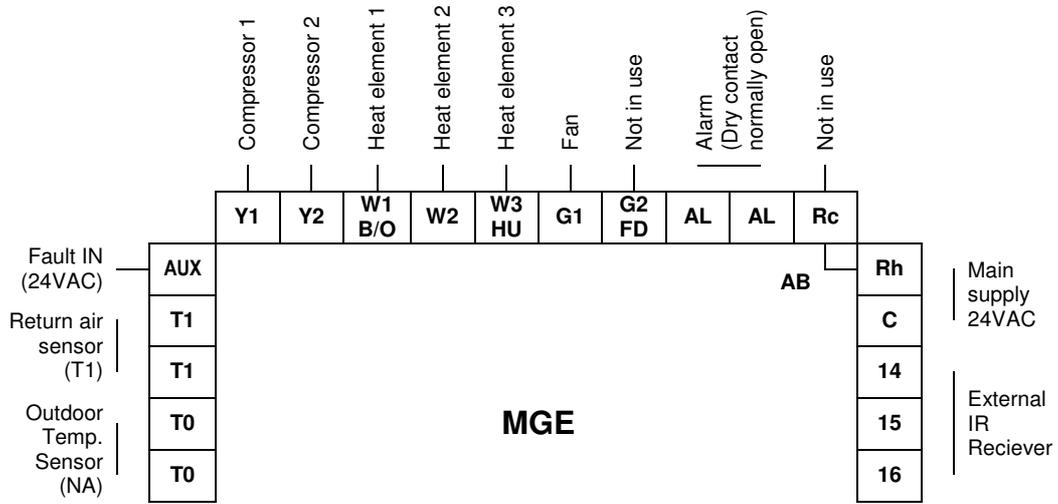

Connect at top first then at bottom.

To change jumpers: Disconnect electricity, remove battery and wait 60 seconds

**Disconnect power before installing battery**

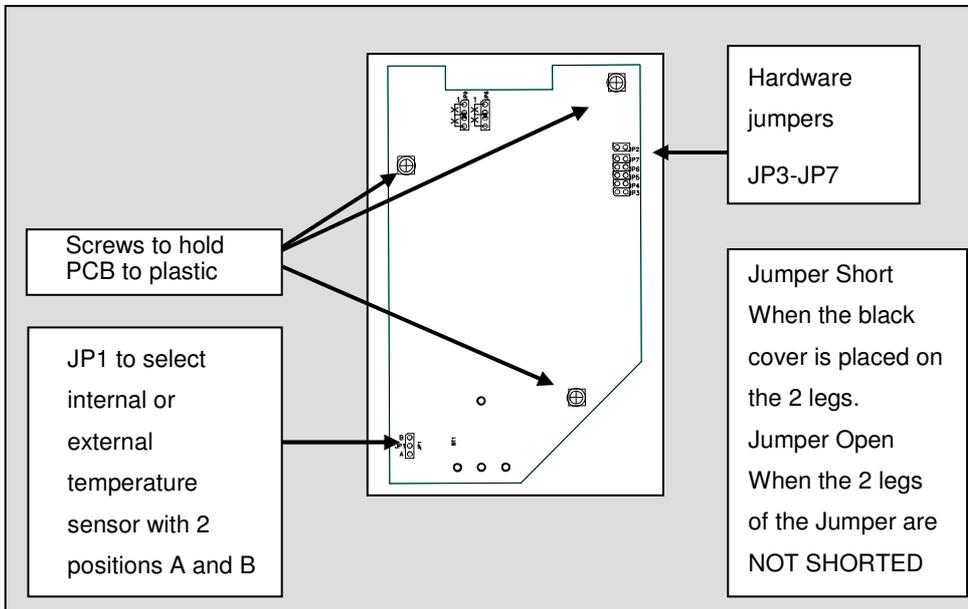

## 2. Wiring Connections

### 3. Hardware jumpers

3.1 The Jumpers are located on the back of the front panel (Inside the thermostat) as shown in the drawing.

**Table 3.1 – Jumper selection**

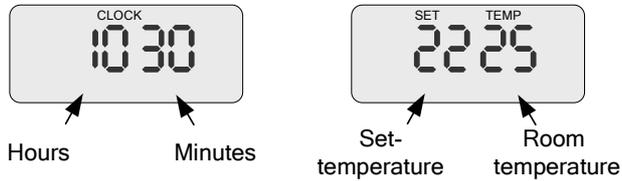

| Jumper | Function  | Position | Default |
|--------|---|----------|---------|
| JP1    | Internal Sensor Control                                   | Pos. A   | Pos. A  |
|        | External sensor control                                   | Pos. B   |         |
| JP3    | 4 minutes delay for compressor                            | Open     | Open    |
|        | No delay  | Short    |         |
| JP4    | Clock mode – 24 hours                                     | Open     | Open    |
|        | Clock mode – 12 hours (AM/PM)                             | Short    |         |
| JP5    | Temperature in Fahrenheit                                 | Open     | Short   |
|        | Temperature in Celsius                                    | Short    |         |
| JP6    | Europe timer type   | Short    | Short   |
| JP7    | Reversing Valve (W1) output in heating mode (eg Rheem)    | Short    | Short   |
|        | Reversing Valve (W1) output in cooling (eg ClimateMaster) | Open     |         |

## 4. Operating Manual

### 4.1 Thermostat display

In normal display mode, the LCD alternates between real time clock and set/room temperatures.

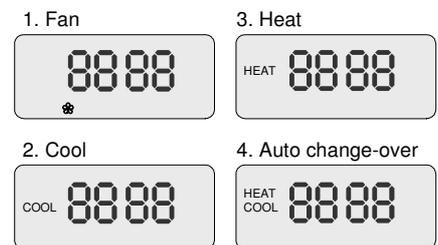

### 4.2 On/Off

- Press the  button to turn the thermostat ON.  
When on – the “SYSTEM” LED will turn on.
- Press and hold the  button to turn the thermostat OFF.

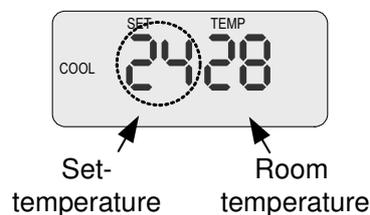

### 4.3 Selecting modes

- Press the  button to switch between the four modes:
  1. Fan only - When ventilation only needed.
  2. Cooling
  3. Heating
  4. Cool/Heat - Auto change-overActivating Heating or Cooling automatically according to the set and room temperatures.  
The current active mode will flash.

### 4.4 Set temperature

- Press the  buttons – the word “SET” will flash.
- Adjust the set temperature using the  buttons (range: 5-35°C).

#### 4.5 Auto fan

- Press the  button to switch between “fan on” and “auto fan” modes.

In “auto fan” mode – the fan will work only when there is demand for cooling or heating.

#### 4.6 Real time clock and day

##### Adjust the hours

- Press the  button - the hours will flash.
- Adjust the hours using the  button.

##### Adjust the minutes

- Press the  button again – the minutes will flash.
- Adjust the minutes using the  button.

##### Set the day

- Press the  button again – the days will flash.
- Set the day using the  button.
- Press the  button again to return to normal display.

#### 4.7 Weekly Program

The thermostat can be activated and deactivated using a weekly program.

Different programs can be set for the weekdays (Monday to Friday), Saturday and Sunday (all weekdays with the same program).

Two different programs can be set for each day (1<sup>st</sup> start time, 1<sup>st</sup> stop time, 2<sup>nd</sup> start time, 2<sup>nd</sup> stop time).

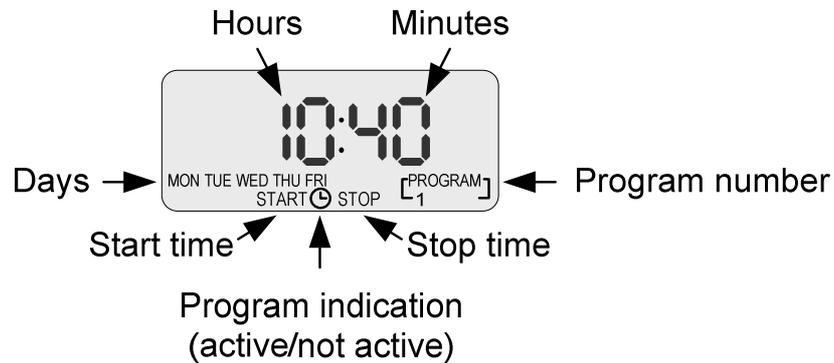

The following program chart can assist you during the program settings.

| Monday → Friday |                 | Saturday       |                 | Sunday         |                 |
|-----------------|-----------------|----------------|-----------------|----------------|-----------------|
| [PROGRAM]<br>1  | START ☹ ___:___ | [PROGRAM]<br>1 | START ☹ ___:___ | [PROGRAM]<br>1 | START ☹ ___:___ |
|                 | ☹ STOP ___:___  |                | ☹ STOP ___:___  |                | ☹ STOP ___:___  |
| [PROGRAM]<br>2  | START ☹ ___:___ | [PROGRAM]<br>2 | START ☹ ___:___ | [PROGRAM]<br>2 | START ☹ ___:___ |
|                 | ☹ STOP ___:___  |                | ☹ STOP ___:___  |                | ☹ STOP ___:___  |

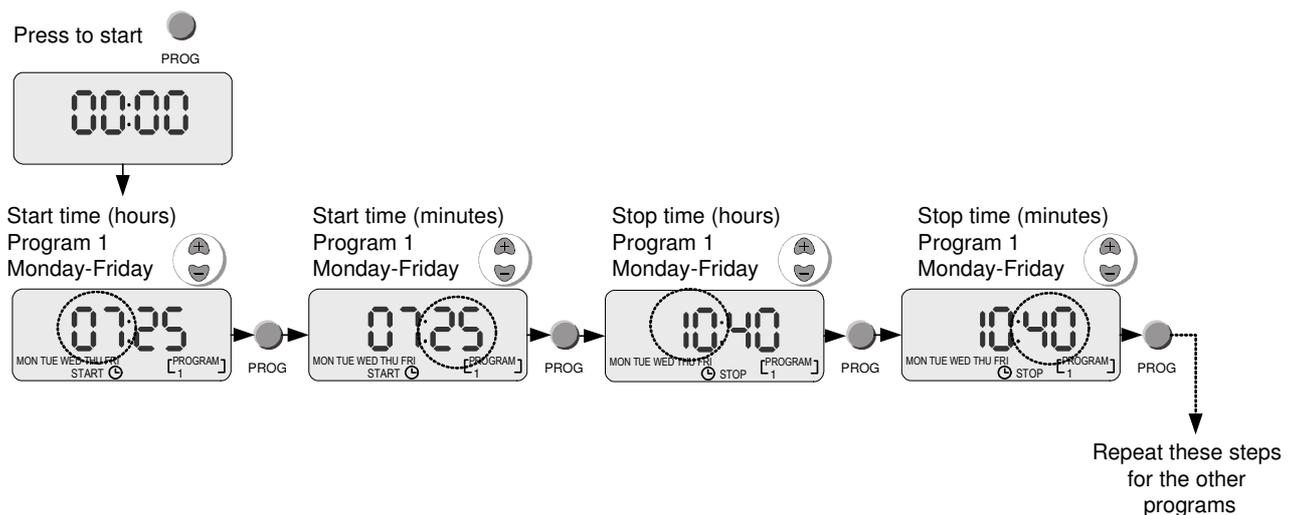

#### Programming procedure

- Press the  button - 00:00 will appear on the display
- Press the  button again – the HOURS will flash and the START, PROGRAM 1 and MON→FRI symbols will appear on the display.
- Adjust the start time (hours) for the 1<sup>st</sup> program of the weekdays using the  buttons.
- Press the  button again – the MINUTES will flash and the START, PROGRAM 1 and MON→FRI symbols will appear on the display.
- Adjust the start time (minutes) for the 1<sup>st</sup> program of the weekdays using the  buttons.
- Press the  button again – the HOURS will flash and the STOP, PROGRAM 1 and MON→FRI symbols will appear on the display.
- Adjust the start time (hours) for the 1<sup>st</sup> program of the weekdays using the  buttons.
- Press the  button again – the MINUTES will flash and the STOP, PROGRAM 1 and MON→FRI symbols will appear on the display.
- Adjust the start time (minutes) for the 1<sup>st</sup> program of the weekdays using the  buttons.
- Repeat these steps for program 2 (weekdays), for the two programs of Saturday and for the two programs of Sunday.

## Program display

## Program layout

## Remarks

- Every program must have a start time and stop time within the same day.
- Use the button for quick review/edit the program – jump between days.
- Press and hold the button to switch between program mode (program activated) and manual mode (program not activated) – the program settings will remain in the memory of the thermostat until the program is reactivated (this can be done only when the thermostat is ON). An active program is indicated by the icon.
- During programming the thermostat will automatically return to normal display mode when no button is pressed within 5 seconds.

## 4.8 Technician Settings

- Press the  button – “C50” will appear on the display.
- Change the number to “55” using the  buttons.

### High temperature limit

- Press the  button again – “HL” and the high temperature limit will appear on the display.
- Adjust the high temperature limit using the  buttons (range: 4-39°C, do not set the high temperature limit higher than 31°C where cooling is used).

### Low temperature limit

- Press the  button again – “LL” and the low temperature limit will appear on the display.
- Adjust the low temperature limit using the  buttons (range: 2-30°C, do not set the low temperature limit lower than 18°C where cooling is used or lower than 16°C where heat pump is used).

### High temperature alarm

- Press the  button again – “HL” and the high temperature alarm will appear on the display.
- Adjust the high temperature limit using the  buttons (range: 4-46°C).

**Note:** When the alarm activates, the AL,AL outputs will activate and the ALARM red LED will flash.

### Low temperature alarm

- Press the  button again – “LA” and the low temperature alarm will appear on the display.
- Adjust the low temperature limit using the  buttons (range: 2-44°C).

**Note:** When the alarm activates, the AL,AL outputs will activate and the ALARM red LED will flash.

### Reset the alarm

The alarm will automatically clear itself when the temperature returns to normal range.

The alarm can be manually cleared by pressing and holding the  button

**Contacts**

In the unlikely event of a problem with this **Rheem** controller you should contact the installing contractor.
